# Model Behavior: Training a Machine Learning Network in Real-Time

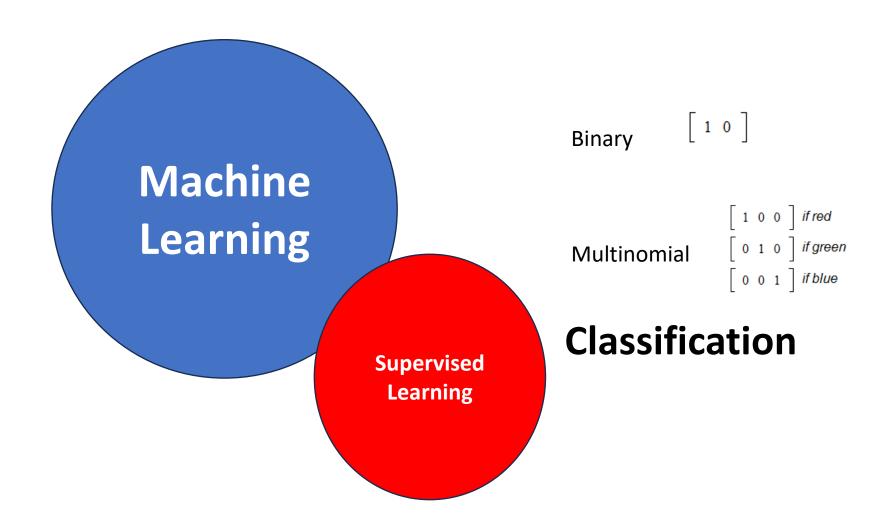

# Agenda

- Supervised Machine Learning Classification
- When to use it (Cases)
- About R
- Credit Card dataset
- Neural Networks

#### Supervised Learning

### When to use it (Cases)

- Document classification
- Spam filtering
- Medical diagnostic test
- Customer behavior prediction
- Fraud detection

#### R and Data Science process

Collection

Cleaning

**Exploring** 

Modeling

Deployment

# Data Story - Credit Card Dataset

## Supervised ML Model (Classification)

#### Supervised ML Model (Classification)

#### **Cross Validation**

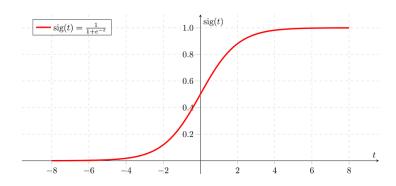

Random Split:

#### Classification model assumptions

There is minimal or no multicollinearity among the independent variables.

The observations to be independent of each other.

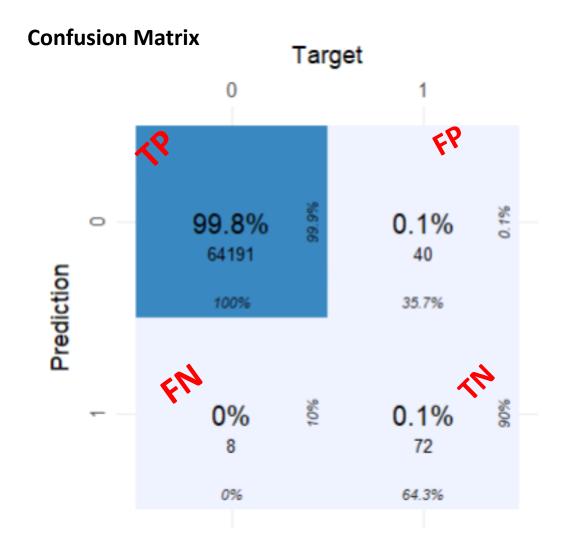

#### Model evaluation measures

 Confusion Matrix- used to describe the performance of a classification model

Accuracy – simply measures how often the classifier correctly predicts

 ROC AUC score shows how well the classifier distinguishes positive and negative classes. It can take values from 0 to 1

#### **Supervised Classification model**

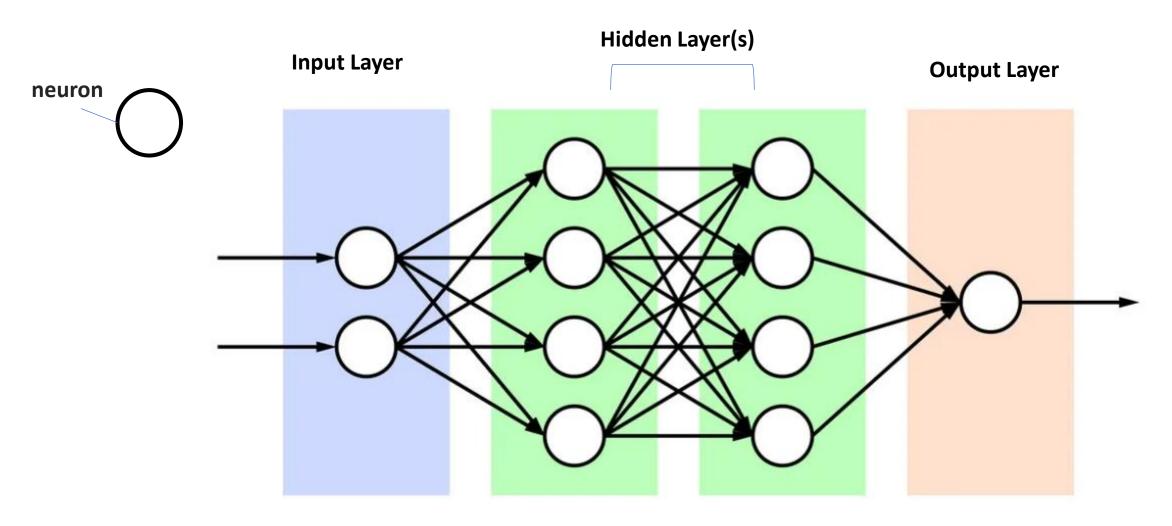

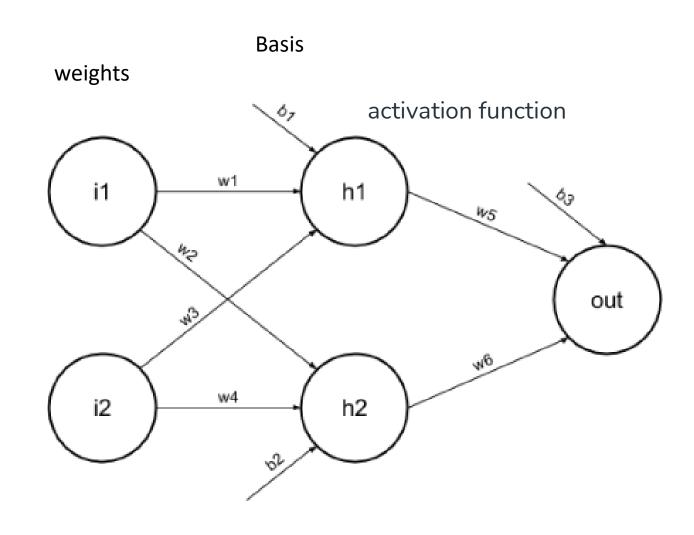

Evaluation	Scores
Accuracy	.9
Recall	.64
Precision	.9
ROC AUC	.96
F 1 score	.75

#### Neural Network

#### Neural Network

# Back to the Credit Card Dataset story Fraud detection

#### Using neuralnet package

```
library(neuralnet)
split <- createDataPartition(y = df$Class, p= 0.8, list = F)

creditcard.training <- df[split,]
creditcard.test <- df[ split,]

creditcart.training.two <- creditcard.training%>% mutate_at(c(1:30), funs(c(scale(.))))

nn_model <- neuralnet(Class ~ ., data = creditcart.training.two, hidden = c(5,2), linear.output = F)</pre>
```

#### Using neuralnet package

```
library(neuralnet)

# plot our neural network

plot(nn_model, rep ="best")

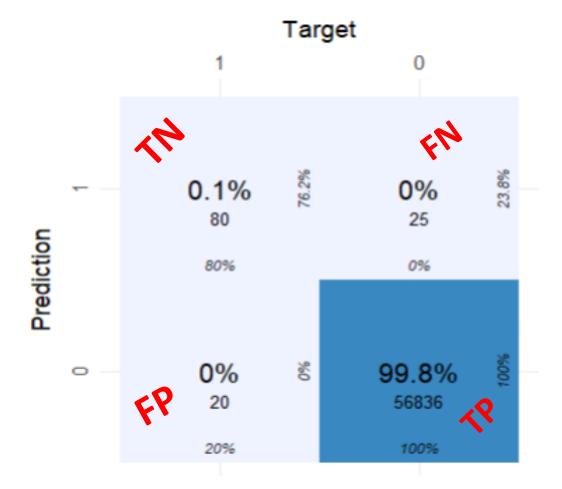

#scale the test dataset
setcreditcart.test.two <- creditcard.test %>% mutate_at(c(1:30),
funs(c(scale(.))))

#create the predicted values
predicted.nn.values <- neuralnet::compute(nn_model, creditcart.test.two)</pre>
```

#### Deep learning (neural networks) model

**Confusion Matrix** 

Evaluation	Scores
Accuracy	.99
Recall	.99
Precision	.99
ROC AUC	.89
F 1 score	.91
